PROYECTO SOMOS AGUA. ACCIÓN 5. INFORME DE RESULTADOS DE LA MONITORIZACIÓN DE COLMENAS

Las opiniones y documentación aportadas en esta publicación son de exclusiva responsabilidad del autor o autores de los mismos, y no reflejan necesariamente los puntos de vista de las entidades que apoyan económicamente el proyectoLas opiniones y documentación aportadas en esta publicación son de exclusiva responsabilidad del autor o autores de los mismos, y no reflejan necesariamente los puntos de vista de las entidades que apoyan económicamente el proyecto.

INTRODUCCIÓN

Los datos se han obtenido a través de la monitorización de colmenares de explotaciones apícolas tanto en su productividad, como en la mortandad de las colmenas.

Para ello se ha llevado a cabo la instalación de unos sensores para analizar el estado de la colmena en diferentes condiciones de disponibilidad hídrica.

PROCESO DE TRABAJO

SELECCIÓN DE COLMENARES

Se seleccionan tres colmenares próximos y ubicados en entornos de similares características ecológicas: zona de secano con acceso a un recurso hídrico natural y estacional.

COLMENAR 1: CONTROL_ Acceso a recursos hídricos naturales a menos de 400 metros

COLMENAR 2: BAJA DISPONIBILIDAD DE RECURSOS HIDRICOS_ Sin acceso a recursos hídricos de forma natural en el entorno cercano.

COLMENAR 3: ALTA DISPONIBILIDAD DE RECURSOS HIDRICOS_ Suplementados con bebederos

PARAMETROS A ANALIZAR EN CADA COLMENAR

Pluviometría

Temperatura

Disponibilidad de recursos en el entorno (calendario de floración. Ver anejo)

PARAMETROS A ANALIZAR EN CADA COLMENA

MORTALIDAD:

Análisis sanitarios:

Tasa de infestación de varroa (trimestral)

Otros parásitos (bianual): (Virus de la parálisis aguda, virus de la parálisis crónica, virus de las alas deformadas, *Nosema apis* y *Nosema ceranae*)

Nº de colmenas muertas en relación al total del apiario (anual)

PRODUCTIVIDAD

Producción:

Kg por colmena (anual)

Estado físico:

Análisis de recursos tróficos disponibles. Recogida y análisis de muestras de polen (semanal)

Desarrollo de la colonia: % de cuadros de cria (mensual)

Actividad (constante)

Peso (constante)

Humedad (constante)

Temperatura (constante)

CALENDARIO DE FLORACIÓN

La finalidad es ver los recursos polínicos y nectaríferos de que disponen los apiarios, con la finalidad de relacionarlos con el estado físico de las colmenas en cada momento, ver posibles necesidades y requerimientos. Además de inventariar los diferentes tipos de mieles y pólenes existentes

Muestras de néctar cada 15 días y de pólenes semanales en los colmenares para ver la variación de recursos tróficos y su utilización en función de factores externos, como la climatología y la existencia de recursos hídricos; valoración paralela del estado físico y sanitario de los apiarios y una serie de colmenas de forma individual.

Además se completara 2 salidas de campo mensuales en abril, mayo, junio y julio en las que se definirán las especies de plantas presentes en el entorno de 2 kilómetros de los colmenares con el objeto de tener constancia de las especies presentes que pueden ser aprovechadas por las abejas y el uso que hacen de ellas.

RESULTADOS

Los datos de las colmenas monitorizadas debido a su extensión se encuentran en el Anexo I de este documento.

DATOS CLIMATOLÓGICOS

Obtenidos de la Estación meteorológica NOROMET (Asociación Meteorológica del Noroeste Peninsular) nº24, ubicada en Soto y Amio.

Datos de la estación: Oregon WMR300 ubicada en Bobia, provincia de León, a una altitud de 1090 metros. A menos de 1 km de las colmenas monitorizadas.
